A Lightweight Study of Graph Models

Abstract

We present a lightweight method for representing document semantics in a knowledge graph. The results sh

1 Introduction

This paper investigates how a knowledge graph can preserve page, section, and paragraph semantics for re

2 Method

Our approach uses PyMuPDF for PDF parsing and RDFLib for graph construction. We use TF-IDF to derive

3 Results

Our results show that topic-page lookup and section retrieval become easier with SPARQL. The system ach

4 Conclusion

In conclusion, the graph-based representation supports explainable document retrieval. Future work will add
